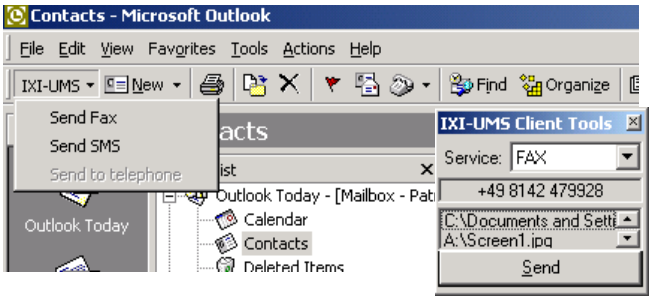
Unified Messaging with more Comfort for Terminal Server: IXI-UMS Client Tools for Windows Terminal Server and CITRIX MetaFrame

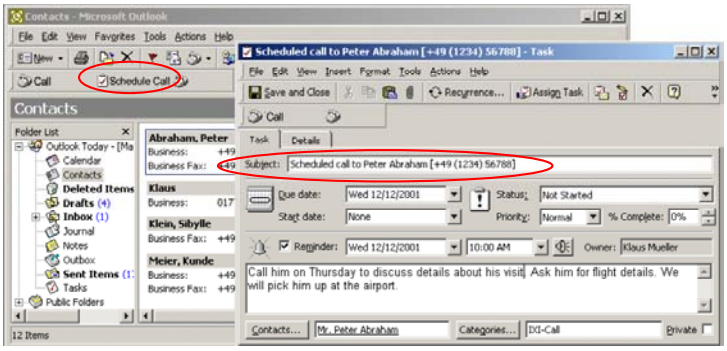


The IXI-UMS Client Tools from version 5.5 on can be applied in Terminal Server environment. After extensive tests, serVonic releases the Tools for the application with CITRIX MetaFrame. The Client Tools run under Microsoft Windows Terminal Server as well as with CITRIX MetaFrame (in Terminal Mode and as Published Application): The Client Tools offer an add-in for the sending of faxes and short messages directly out of Outlook Contacts. The user can forward incoming answering machine messages in the inbox to his telephone as voice-mail. The Client Tools 5.5 offer the user a Drop Point, with that he can insert a number for the sending of faxes, voice-mails or short messages by Drag&Drop out of any application. You can insert the files you want to send by fax, mail or voice from the Explorer by Drag&Drop. IXI-UMS prepares the e-mail with the address of the recipient, way of transmission and file-attachments.

Until now it was only possible to send different types of files via fax printer driver separately. The new Client Tools allow to send joint faxes via IXI-UMS fax printer driver. Out of different Windows applications, the user can put together all the documents he wants to send by fax, e.g. a Word document, a Corel Draw file and a PowerPoint slide. All documents are put together by IXI-UMS and sent in one fax.

CTI Computer Telephony Integration for Terminal Server: IXI-Call Client

serVonic's Computer Telephony Integration software is suitable for Terminal Server application. The IXI-Call Client with features like e.g. telephony status monitor, instant messaging easy dialing and integration into Outlook Contacts and Notes Address Books can be applied under Microsoft Windows Terminal Server as well as under CITRIX MetaFrame - as Published Application or in Terminal Mode.



Unified Communication for Terminal Server

serVonic's CTI-software and unified messaging software offers unified communication for Terminals. Both the communication servers IXI-UMS and IXI-Call provide perfect integration, the respective Terminal-Clients can make use of call-management with IXI-Call and make your daily working routine more effective by providing features like caller identification, easy dialing, journaling, instant messaging, resubmission of calls and out of the office indication; for the Terminal-Clients, IXI-UMS offers e.g. fax printer driver, Word-macros for mail merge fax and auto fax, Fax und SMS directly out of Outlook Contacts.
